After Hours Emergency
SSP Dispatch 705-436-2141

Thank you for
your patience

WATER RECONNECTION - WHAT TO DO

When water service is reconnected, it's important to follow a few simple steps:

- Turn on a tap at the lowest point in your home (such as a basement/ground floor tap) and let the water run for a few minutes.
- Turn on a tap at the highest point (like an upstairs bathroom) to help release any trapped air in the system.

This will help clear the lines, flush out any sediment, and restore even water pressure throughout your home. You may hear some sputtering at first — this is normal as air is pushed out of the pipes.
